Commander, WRAMC  
Attn: HSHL-EH (Environmental Coordinator)  
Building 1, Room F005  
Washington, DC 20307-5001

Dear Commander:

On October 8, 1992, USDA Forest Service personnel conducted gypsy moth egg mass surveys at Walter Reed Army Medical Center Hospital, Forest Glen Section and Glen Haven Section. The purpose of the surveys was to determine population densities and to assess the potential for defoliation and the need for treatment in 1993.

The survey plot locations are shown in Figures 1-3. I am pleased to report that no egg masses were detected at any of these three Army sites. Since no noticeable gypsy moth caused tree defoliation is expected at any of these sites in 1993, treatment will not be necessary.

If you have any questions or require additional information, please call me at 304-285-1541.

Sincerely,

*Rodney L. Whiteman*
